Application

29.3.2015

I'm a 25-year-old IT-Engineer (bachelor's degree) student. My main field of study is software engineering. I will be graduating in December 2015. I am currently looking for the first job on my field of studies.

During my studies, I have mostly used Java, C# and C++. I have also become familiar with design patterns and UML-diagrams. Database management (MySQL) and web application development (mainly PHP) have also been a part of my studies. I have an excellent knowledge of MS Office tools. During my studies, I have completed several larger projects, so project management and working in a project is not foreign for me. These projects include building a Lego Mindstorms robot and making it alive using Java and Lejos NXJ interface. At the time of writing I'm working on a project in which we are creating 3 android mobile games for a Finnish animation studio Anima Vitae. The project will end on Easter, and after that I can use all the code and other content of the game in my portfolios and applications.

Alongside of my studies I work at McDonald's Oy as an Assistant Shift Manager. I have worked at McDonalds' since 2008 and now I'm looking for a job that matches my field of studies. As a manager of a restaurant, I have learned to work customer-oriented, while also keeping in mind the common business figures.

I am social by nature, and I get along well with different kinds of people. As a worker, I am extremely flexible and conscientious. I have excellent teamwork skills, but I work efficiently alone as well. I am very persistent and I want to commit to my work. I do not yet have a lot of working experience from IT-industry, but I believe that my thirst of knowledge and enthusiasm substitutes for what my experience may be lacking. I will be happy to tell you more about myself at a job interview.

Thank you in advance for your reply,

Miska Rantanen
